

# A NATURAL PRODUCT

 100%  
BIODEGRADABLE

## AN ONGOING RENEWAL

- Latex is harvested by tapping the rubber tree in a manner that does not harm the tree.
- Each tree—and there are *billions*—consumes CO<sub>2</sub>, thus reducing global warming.
- When latex is processed, each part of the product is used.
  - After the tree no longer produces latex, it is harvested and its wood is turned into lumber.
- Each year mature trees are tapped, old trees are harvested, new trees are planted, and CO<sub>2</sub> is consumed.
